

The Dark Side of Election Reform

The geography of public goods

Adrián Lucardi¹ Eric Magar¹

Urban v. rural

Three perspectives

Electoral systems Rogowski&Kaiser 2002, Persson&Tabellini 2003,
Jusko 2015

Decentralization and local capture Reinikka&Svensson 2004, Banerjee
et al 2017, Rizzo 2018

Malapportionment Beramendi&Jensen 2015, Ansolabehere et al 2002,
Samuels&Snyder 2001

Municipal electoral rules in Mexico

Electoral system	Number of municipalities	Cases	Vote needed for council majority
SP-SMD	20	Nayarit post-reform	(varies)

Proportional	46	Guanajuato	~ 40
	132	Durango, Morelos, Tlaxcala	~ 35
	57	San Luis Potosí	~ 25

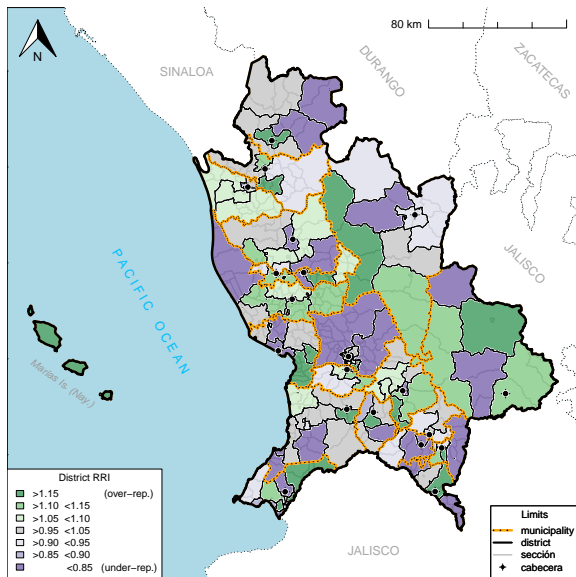

Winner-gets-bonus	1,624	Rest	(plurality)

Total	1,879	Thirty states	

Nayarit → reform in 2008

- States (32)
- Municipalities (2,500+)
 - *Cabeceras* = “City Halls”
- *Secciones* (65,000+)
 - Basic units of electoral administration
 - No other political/administrative role
 - Population $\in [50, 2, 500]$

The state of Nayarit since 2008

Are *cabeceras* dominant?

- Díaz Cayeros (2006): bulk of spending in *cabeceras*
- Urban areas easier to reach are electorally more attractive
- Reform in Nayarit predicated on these grounds

Census for 2005 and 2010; sección-level

Infrastructure for 2006, 2009, and 2012; geo-located

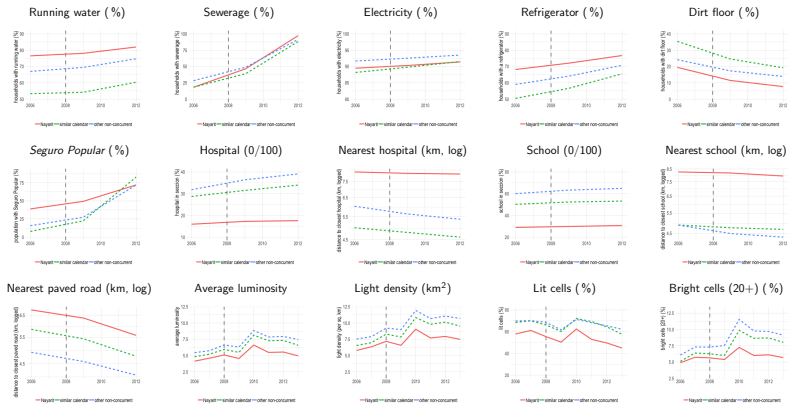

Federal elections for 2006, 2009, and 2012; sección-level

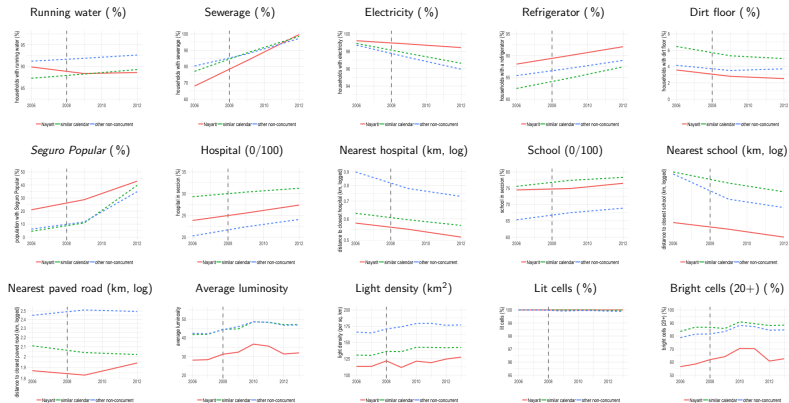

Satellite lights for 2006–2013; $< 1\text{km}^2$ cells

Nayarita: 2005, 2008, 2011, 2014

Non-concurrent: 2004, 2007, 2010, 2013

Federal: 2006, 2009, 2012, 2015

Compare rural v. urban before and after reform

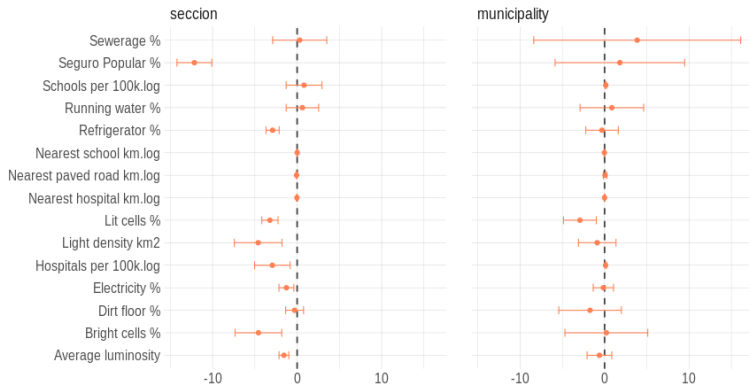

Aggregation at two levels:

- 1 sección
- 2 municipality subsets (rural/urban)

Dif-in-dif

- Separate urban and rural samples
- Bootstrap $\hat{\beta}_{\text{rural}} - \hat{\beta}_{\text{urban}}$
- SEs clustered by state

Results (bootstrapped $\hat{\beta}_{\text{rural}} - \hat{\beta}_{\text{urban}}$)

What's next?

- Conditional on electoral competitiveness (PRI strength)
- Δ turnout
- Exploit PR thresholds
- Measure treatment as “pivotalness”
- More data? 2020 census

What's next?

- Conditional on electoral competitiveness (PRI strength)
- Δ turnout
- Exploit PR thresholds
- Measure treatment as “pivotalness”
- More data? 2020 census

Thank you!

Electoral calendars

Coding urban vs. rural secciones

Outcome variables

outcome	description	years
(a) <i>Household and population characteristics</i>		
<i>Running water</i> (%)	% of households with running water	2006, 2009, 2012
<i>Sewerage</i> (%)	% of households with sewerage	2006, 2009, 2012
<i>Electricity</i> (%)	% of households with electricity	2006, 2009, 2012
<i>Refrigerator</i> (%)	% of households that have a refrigerator	2006, 2009, 2012
<i>Dirt floor</i> (%)	% of households with dirt floors	2006, 2009, 2012
<i>Seguro Popular</i> (%)	% of population enrolled in <i>Seguro Popular</i>	2006, 2009, 2012
(b) <i>Public works</i>		
<i>Hospital</i> (0/100)	100 if there is a health center in the <i>sección</i> , 0 if there isn't	2006, 2009, 2012
<i>Nearest hospital</i> (km)	km from <i>sección</i> 's centroid to closest health center in municipality	2006, 2009, 2012
<i>School</i> (0/100)	100 if there is a school in the <i>sección</i> , 0 if there isn't	2006, 2009, 2012
<i>Nearest school</i> (km)	km from <i>sección</i> 's centroid to closest school in municipality	2006, 2009, 2012
<i>Nearest paved road</i> (km)	km from <i>sección</i> 's centroid to closest paved road in municipality	2006, 2009, 2012
(c) <i>Satellite lights</i>		
<i>Average luminosity</i>	mean digital number value for all cells within a <i>sección</i>	2006 to 2013
<i>Light density</i> (km ²)	sum of digital number values within <i>sección</i> divided by its area	2006 to 2013
<i>Lit cells</i> (%)	% of cells with a digital number value of 1 or more in <i>sección</i>	2006 to 2013
<i>Bright cells</i> (20+) (%)	% of cells in <i>sección</i> with a digital number of 20 or higher	2006 to 2013
